GUIDELINES TO AUTHORS

The *Journal of Entomological Research* is published half-yearly. Original contributions covering every aspect of fundamental and applied entomological research will be considered for publication. Also, thought provoking articles projecting new concepts along with short communications are accommodated in this journal. Besides these, critical research reviews on current topics, book reviews and gallery of eminent entomologists will appear depending upon the availability of suitable material.

The format for original research articles and short communications will be the same except that the latter require no headed sections. The TITLE should be short and specific to identify the content of the article followed by authors name and address. Any change of address should be given as a footnote. The ABSTRACTS written in complete sentences should highlight the findings in such a way so that the abstracting journals utilize this information without any change. It should not have references, illustrations and tables. The INTRODUCTORY part should be brief and to the point and may contain pertinent review of literature. The MATERIALS AND METHODS should include important materials used and details of experimental techniques employed. When the methods are well known, citation of standard work is sufficient. The RESULTS AND DISCUSSION should be combined to avoid repetition followed by ACKNOWLEDGEMENTS. The authors need not acknowledge the authorities for providing facilities for research work.

The name of a taxon should be supplemented with the name of its author (*Psaldolytta* Peringuey; *Musca domestica* Linnaeus). The author citation need appear only once at its first occurrence. Trade names of pesticides should not be used. Only common names or chemical definitions should be used. The articles should contain only metric units. Figure legend is to be typed on a separate sheet. Author's names and title of the article should be written lightly with the pencil on the back side of illustration or photographs. All writing on the figure should be done with the help of stencils.

The description of a new species should be according to the format followed in this journal (Part 1, 1977).

The citation of REFERENCES in the text and at the end of each article should be according to the following system. Depending upon the construction of the sentence, the citation will appear as Siddiqui and Chatterji (1972), or (Siddiqui and Chatterji, 1972). When there are three authors, name all in the first citation, e.g., Sarup, Sircar, and Pandey (1977) but subsequently use Sarup *et al.* (1977). When there are four or more authors, cite their paper in the form of Sarup *et al.* (1977). The references should be complete and have the names of the authors, initials, year of publication, full title of the paper, name of the journal (abbreviated according to the latest edition of *World List of Scientific Periodicals*), series in parenthesis, volume (double underline), part within parenthesis, and complete page range (not merely the first page). Authors should ensure that all references in the text appear at the end of the paper and vice-versa and that names and years at two places correspond.
